UNCOVERING HIDDEN THREATS

A DARK WEB REALITY

Do you think your business is safe?
Behind the scenes, cybercriminals steal your sensitive data to sell on the dark web or use in attacks that disrupt operation.

What does STIGroup offer?

At STIGroup, we help you uncover whether confidential data, including emails, passwords, financial records and intellectual property, has been compromised.

After a breach, exposed material usually resurfaces in these hidden parts of the internet, which are regularly accessed via programs like Tor (The Onion Router).

Our monitoring services help you safeguard your company, reputation and clients by seeing these threats early on before they become serious issues.

STIGroup's Role in Protecting your Data

We take a proactive, hands-on approach to protect your organization.

1. Continuous Scanning:
Our tools scan dark web forums, marketplaces & anonymous networks in real time for signs of compromised data.

2. Threat Analysis:
We carefully analyze findings to assess your organization's risk and identify exposed data.

3. Immediate Alerts:
If we find your credentials or sensitive data, you get an instant alert—no delays, no guesswork.

4. Guided Response: We don't stop at alerts. STIGroup works directly with your team to respond quickly, reset credentials, secure systems and prevent further exposure.

Why This Matters

· Early warnings prevent disasters. Act before hackers do.

· It's proactive protection. Don't wait — prevent breaches.

· More than antivirus. Protect your people and business.

· Today's threats are invisible.—you won't know your data's been stolen. We give you the visibility and control to stop it early.

Take Control Before Someone Else Does

You can't secure what you can't see. STIGroup uncovers hidden threats before your data is exposed.
